DP-00004 (MEM): Preparing SOLO for Global Markets - Summary

Status: Draft (proposal memorandum; to be voted)

Version: 1.0.0

NON-BINDING SUMMARY. This memorandum is informational only and is subordinate to the governing instruments and any adopted resolutions. In the event of conflict, the normative resolution text controls.

Summary

Solomon is entering public USDv launch alongside a significant expansion in product activity, partnerships, distribution, and market reach. SOLO's futarchy AMM already contains approximately \$3 million of liquidity, making it the deepest market in the MetaDAO ecosystem, including META itself. The Meteora pool has completed its original role as an indexed discovery venue.

This proposal withdraws the DAO's entire single-sided Meteora position and returns approximately 900,000 SOLO to the Company Treasury Vault. With substantial liquidity already available through the futarchy AMM, removing the legacy position will allow SOLO to respond more directly to new demand as the launch unfolds. The returned assets can later support broader exchange access, professional market-making arrangements, ecosystem rewards, and Solomon's continued expansion, subject to separate governance approval.

Rationale

The Meteora SOLO-USDC pool was established during SOLO's initial phase as a discovery venue.

Although the futarchy AMMs had sufficient liquidity, they were not indexed by Dexscreener and other widely used market-data platforms. The Meteora pool ensured that SOLO could be found, tracked, and accessed through conventional market interfaces.

That bootstrap function has now been served. Futarchy AMMs have since gained the visibility required to support the market directly. SOLO's futarchy AMM currently contains [approximately \\$3 million of liquidity](#), giving it the largest liquidity base of any project in the MetaDAO ecosystem, including META itself.

That depth is sufficient to support active trading independently of the Meteora position.

Meanwhile, the Meteora position leaves approximately 900,000 treasury-owned SOLO across price ranges programmed when the pool was created. The position was useful when conventional market visibility was the priority. With that constraint resolved, it now fragments trading across venues and limits how directly the market can respond to new demand.

That structure is poorly matched to Solomon's next phase. The public launch is expected to bring new product activity, partnerships, distribution, and broader market attention. Removing the legacy position will concentrate trading within an already deep futarchy AMM and allow organic supply and demand to absorb new information without a large treasury position continuously leaning against incremental demand.

Withdrawal will also return strategically useful SOLO to the Company Treasury Vault. Subject to later governance approval, those assets may support broader exchange access, professional market-making arrangements, new trading venues, ecosystem rewards, and other initiatives connected to Solomon's launch and growth.

This proposal authorizes only the withdrawal and transfer of the assets. Any subsequent deployment will require separate governance approval.

Key Parameters

- **Pool:** Meteora DAMM v2 SOLO-USDC
- **Pool Address:** 2zsbECzM7roqnDcuv2TNGpfv5PAnuqGmMo5YPtqmUz5p
- **Network:** Solana mainnet-beta
- **Withdrawal Amount:** 100% of the DAO's liquidity position
- **Approximate Current Position:** 900,017.47 SOLO, presently single-sided and subject to change through ordinary pool activity
- **Assets to Be Received:** All SOLO and USDC attributable to the DAO's liquidity position at execution
- **Destination:** Company Treasury Vault at 98SPcyUZ2rqM2dgjCqqSXS4gJrNTLSNUAAVCF38xYj9u
- **SOLO Mint:** SoLo9oxzLDpcq1dpqAgMwgce5WqkRDtNXK7EPnbmeta
- **USDC Mint:** EPjFWdd5AufqSSqeM2qN1xzybapC8G4wEGGkZwyTDt1v
- **Execution Method:** Standard Meteora DAMM v2 withdrawal instructions followed by transfer to the
- **Future Use:** Potential broader exchange access, professional market-making arrangements, new trading venues, ecosystem rewards, and other strategic initiatives, subject in every case to separate governance approval

Process

If this proposal is adopted, the Governance System will authorize the Treasury Executor to unwind the DAO's entire liquidity position in the Pool.

The Execution Bundle will:

1. withdraw 100% of the DAO's position from the Pool, subject only to de minimis residual dust that cannot be economically withdrawn;
2. receive all SOLO and USDC attributable to that position at the time of execution; and 3. transfer the Withdrawn Assets promptly to the Company Treasury Vault.

The assets will then remain in the Company Treasury Vault until a later governance proposal authorizes a specific use.

Section 1. Authorization of Pool Withdrawal

Resolved, that the DAO hereby authorizes the Treasury Executor to withdraw 100% of the DAO's liquidity position from the Pool.

Resolved further, that this authority applies only to the Meteora DAMM v2 SOLO-USDC pool at 2ZsbECzM7roqnDcuv2TNGpfv5PAnuqGmMo5YPTqmUz5p.

Section 2. Assets Covered and Treasury Transfer

Resolved, that all SOLO and USDC received from withdrawing the DAO's position shall be treated as Withdrawn Assets under this proposal.

Resolved further, that if the position contains both SOLO and USDC at the time of execution, the Treasury Executor shall withdraw both assets in full. No separate governance action is required merely because ordinary pool activity changes the composition of the position between proposal publication and execution. This will be executed through the admin function via MetaDAO and this proposal authorizes that specific action via the memo instruction attached to this proposal.

Resolved further, that the Execution Bundle shall transfer all Withdrawn Assets promptly to the Company Treasury Vault at 98SPcyUZ2rqM2dgjCqqSXS4gJrNTLSNUAAVCF38xYj9u.

Section 3. No Current Deployment Authority

Resolved, that this proposal does not authorize any person or body to distribute, commit, allocate, sell, swap, transfer, lend, stake, pledge, use as collateral, use as market-making inventory, or otherwise deploy the Withdrawn Assets after they reach the Company Treasury Vault.

Until later governance action authorizes a specific use, the Withdrawn Assets shall remain held in the Company Treasury Vault.

Section 4. Core Guardrails

The Treasury Executor must implement this proposal subject to the following constraints:

- the DAO's entire Meteora DAMMv2 liquidity position must be withdrawn
- no borrowing, margin, leverage, or derivatives may be used;
- no swap or trade is authorized as part of execution;
- the Withdrawn Assets may not be used between withdrawal and transfer to the Company Treasury Vault;
- no wash trading or transaction intended to mislead market participants is permitted; and
- no other liquidity pool, vault, staking position, or DAO-controlled asset may be withdrawn from or otherwise affected.

Section 5. Residual Dust and Execution Record

If a residual balance remains because of rounding, minimum withdrawal thresholds, or another technical limitation that makes withdrawal economically impractical, the residual will not constitute a failure to execute this proposal.

The governance record shall disclose:

- the execution transaction signature or signatures;
- the actual amount of SOLO withdrawn and transferred;
- the actual amount of USDC withdrawn and transferred, if any; and
- any residual dust left in the Pool or the DAO's liquidity position.

Plain English

If adopted, this proposal means:

- the Meteora position has completed its original token-discovery purpose;
- the DAO exits its entire position in one specifically identified Meteora SOLO-USDC pool as Solomon enters its public launch phase;
- all SOLO and USDC received from that exit go to the Company Treasury Vault;
- trading and price formation become more concentrated within the indexed futarchy AMMs;
- the proposal does not touch any other DAO position or asset; and
- the withdrawn assets stay in the treasury until governance separately approves their use, including any future exchange access, professional market making, new trading venue, rewards program, or other strategic initiative.

DP-00004: Preparing SOLO for Global Markets

Status: Draft (intended for ratification via Governance System)

Version: 1.0.0

Owner: SOLOMON DAO LLC (via Governance System)

Applies to: DAO governance participants; the Treasury Executor; and any person or body handling the Withdrawn Assets or the Company Treasury Vault.

Effective date: Upon ratification by Governance System and successful on-chain execution of the memo instruction attached to this proposal.

Authority note: This Resolution authorizes only withdrawal of the DAO's liquidity position from the Pool and transfer of the Withdrawn Assets to the Company Treasury Vault. It does not authorize any subsequent deployment of the Withdrawn Assets.

Confidentiality classification: Public (operational/security-sensitive details may be handled under appropriate confidentiality controls)

Supersedes: None

Related: None

Intellectual Property Firewall

"**Protocol**" in this Resolution has the same meaning as "**Protocol IP**" as defined in the Company Agreement of SOLOMON DAO LLC (Operating Agreement Section 2.1(17)) — design, documentation, code, repositories, and other intellectual property. It does not mean an operating business, service, issuer, custodian, counterparty, or other person or entity.

Nothing in this Resolution authorizes the Company, the Head Steward, or any Subcommittee to direct, supervise, or control the operations of any Licensee, counterparty, service provider, or other person. Any external obligations arise only under the applicable License or other written agreement, and only to the extent expressly stated there.

1. Purpose

This Resolution does two things:

1. Authorizes the Treasury Executor to withdraw 100% of the DAO's liquidity position from the Pool, subject only to de minimis residual dust that cannot be economically withdrawn.
2. Requires all SOLO and USDC received from the withdrawal to be transferred promptly to the Company Treasury Vault and held there until later governance action authorizes a specific use.

2. Operative rule

This is normative text proposed for adoption by Governance System. If (and only if) it is adopted and the memo instruction attached to this proposal executes successfully, the operative clauses below are effective as stated.

3. Definitions

1. **"Company Treasury Vault"** means the treasury vault at 98SPcyUZ2rqM2dgjCqqSXS4gJrNTLSNUAAVCF38xYj9u.
2. **"Execution Bundle"** means the on-chain instructions that implement the withdrawal and transfer authorized by this Resolution through the admin function via MetaDAO.
3. **"Governance System"** means the on-chain mechanism by which this Resolution is adopted and the attached memo instruction is executed.
4. **"Pool"** means the Meteora DAMM v2 SOLO-USDC pool on Solana mainnet-beta at 2zsbECzM7roqnDcuv2TNGpfv5PAnuqGmMo5YPtqmUz5p.
5. **"SOLO"** means the SOLO token (mint/address: SoLo9oxzLDpcq1dpqAgMwgce5WqkRDtNXK7EPnbmeta).
6. **"Treasury Executor"** means the person or body authorized through the Governance System to execute the withdrawal and transfer authorized by this Resolution.
7. **"USDC"** means the USDC token (mint/address: EPjFWdd5AufqSSqeM2qN1xzybapC8G4wEGGkZwyTDt1v).
8. **"Withdrawn Assets"** means all SOLO and USDC attributable to the DAO's liquidity position and received from withdrawal of that position at the time of execution.

4. Background and rationale

Solomon is entering public USDv launch alongside a significant expansion in product activity, partnerships, distribution, and market reach. SOLO's futarchy AMM already contains approximately \$3 million of liquidity, making it the deepest market in the MetaDAO ecosystem, including META itself. The Meteora pool has completed its original role as an indexed discovery venue.

This Resolution withdraws the DAO's entire single-sided Meteora position and returns approximately 900,000 SOLO to the Company Treasury Vault. With substantial liquidity already available through the futarchy AMM, removing the legacy position will allow SOLO to respond more directly to new demand as the launch unfolds. The returned assets can later support broader exchange access, professional market-making arrangements, ecosystem rewards, and Solomon's continued expansion, subject to separate governance approval.

The Meteora SOLO-USDC pool was established during SOLO's initial phase as a discovery venue. Although the futarchy AMMs had sufficient liquidity, they were not indexed by Dexscreener and other widely used market-data platforms.

The Meteora pool ensured that SOLO could be found, tracked, and accessed through conventional market interfaces.

That bootstrap function has now been served. Futarchy AMMs have since gained the visibility required to support the market directly. SOLO's futarchy AMM currently contains [approximately \\$3 million of liquidity](#), giving it the largest liquidity base of any project in the MetaDAO ecosystem, including META itself. That depth is sufficient to support active trading independently of the Meteora position.

Meanwhile, the Meteora position leaves approximately 900,000 treasury-owned SOLO across price ranges programmed when the pool was created. The position was useful when conventional market visibility was the priority. With that constraint resolved, it now fragments trading across venues and limits how directly the market can respond to new demand.

That structure is poorly matched to Solomon's next phase. The public launch is expected to bring new product activity, partnerships, distribution, and broader market attention. Removing the legacy position will concentrate trading within an already deep futarchy AMM and allow organic supply and demand to absorb new information without a large treasury position continuously leaning against incremental demand.

Withdrawal will also return strategically useful SOLO to the Company Treasury Vault. Subject to later governance approval, those assets may support broader exchange access, professional market-making arrangements, new trading venues, ecosystem rewards, and other initiatives connected to Solomon's launch and growth.

This Resolution authorizes only the withdrawal and transfer of the assets. Any subsequent deployment will require separate governance approval.

5. Pool withdrawal authorization

5.1 Authorization

RESOLVED: The DAO authorizes the Treasury Executor to withdraw 100% of the DAO's liquidity position from the Pool.

5.2 Pool limitation

RESOLVED: This authority applies only to the Pool.

5.3 Current position

Informative note (non-binding): At drafting, the position is approximately 900,017.47 SOLO, presently single-sided and subject to change through ordinary pool activity.

6. Assets covered and treasury transfer

6.1 Withdrawn Assets

RESOLVED: All SOLO and USDC received from withdrawing the DAO's position shall be treated as Withdrawn Assets under this Resolution.

6.2 Position composition at execution

RESOLVED: If the position contains both SOLO and USDC at the time of execution, the Treasury Executor shall withdraw both assets in full. No separate governance action is required merely because ordinary pool activity changes the composition of the position between proposal publication and execution. This will be executed through the admin function via MetaDAO and this Resolution authorizes that specific action via the memo instruction attached to this proposal.

6.3 Transfer instruction

RESOLVED: The Execution Bundle shall transfer all Withdrawn Assets promptly to the Company Treasury Vault at 98SPcyUZ2rqM2dgjCqqSXS4gJrNTLSNUAAVCF38xYj9u.

Informative note (non-binding): Execution through the admin function via MetaDAO will use standard Meteora DAMM v2 withdrawal instructions followed by transfer to the Company Treasury Vault.

7. No current deployment authority

RESOLVED: This Resolution does not authorize any person or body to distribute, commit, allocate, sell, swap, transfer, lend, stake, pledge, use as collateral, use as market-making inventory, or otherwise deploy the Withdrawn Assets after they reach the Company Treasury Vault.

RESOLVED: Until later governance action authorizes a specific use, the Withdrawn Assets shall remain held in the Company Treasury Vault.

Informative note (non-binding): Subject to later governance approval, the Withdrawn Assets may support broader exchange access, professional market-making arrangements, new trading venues, ecosystem rewards, and other initiatives connected to Solomon's launch and growth.

8. Binding execution constraints

RESOLVED: The Treasury Executor must implement this Resolution subject to the following constraints:

1. **Complete withdrawal:** the DAO's entire liquidity position in the Pool must be withdrawn, subject only to de minimis residual dust.
2. **No leverage:** no borrowing, margin, leverage, or derivatives may be used.
3. **No trading:** no swap or trade is authorized as part of execution.
4. **No interim use:** the Withdrawn Assets may not be used between withdrawal and transfer to the Company Treasury Vault.
5. **Prohibited behavior:** no wash trading or transaction intended to mislead market participants is permitted.
6. **Scope limitation:** no other liquidity pool, vault, staking position, or DAO-controlled asset may be withdrawn from or otherwise affected.

9. Residual dust and execution record

9.1 Residual dust

RESOLVED: If a de minimis residual balance remains because of rounding, minimum withdrawal thresholds, or another technical limitation that makes withdrawal economically impractical, the residual will not constitute a failure to execute this Resolution.

9.2 Execution record

RESOLVED: The governance record shall disclose:

- the execution transaction signature or signatures;
- the actual amount of SOLO withdrawn and transferred;
- the actual amount of USDC withdrawn and transferred, if any; and
- any residual dust left in the Pool or the DAO's liquidity position.
