DP-00005 (MEM): Migrate 20% of Solomon's FutarchyAMM Liquidity to USDv/SOLO - Summary

Status: Draft (proposal memorandum; to be voted)

Version: 1.0.0

NON-BINDING SUMMARY. This memorandum is informational only and is subordinate to the governing instruments and any adopted resolutions. In the event of conflict, the normative resolution text controls.

Summary

This proposal authorizes the migration of 20% (~$700k) of the DAO's SOLO/USDC FutarchyAMM liquidity into a SOLO/USDv pool on Raydium.

The withdrawn assets will be transferred to the Treasury Subcommittee, which will convert the USDC into USDv and deploy the SOLO and USDv as DAO-owned liquidity.

Solomon should lead by using USDv as a quote asset for its own token. This creates productive dollar liquidity for SOLO and allows other participants to provide SOLO/USDv liquidity alongside the DAO.

The remaining 80% of the DAO's position will stay in FutarchyAMM. Any further migration will require a separate governance proposal.

Rationale

USDv allows the dollar side of liquidity positions to earn while supporting trading. Establishing a SOLO/USDv pool applies that capability to Solomon's own market, with eligible liquidity providers receiving USDv distributions alongside trading fees.

Solomon has the largest (~$3.6M) FutarchyAMM pool in the MetaDAO ecosystem, providing sufficient depth to support a limited migration while retaining substantial liquidity for decision markets.

The initial allocation is deliberately limited to 20%. It allows the DAO to observe how liquidity, trading, and arbitrage interact between Raydium and FutarchyAMM, particularly during active decision markets, before considering a larger migration.

Preserving the intended operation of decision markets remains the priority.

Key Parameters

- **Source:** The DAO's SOLO/USDC FutarchyAMM position.
- **Withdrawal:** A one-time withdrawal of 20% of that position.
- **Retained Liquidity:** The remaining 80% stays in FutarchyAMM.
- **Destination Pool:** Raydium SOLO/USDv CPMM, using the same full-range constant-product pricing model as FutarchyAMM.
- **Treasury Subcommittee Account:** `8GVq1srBAZBsCeYpwdKUwEXzDffwAE5xSLWB1ec2gerr`.
- **Ownership:** The resulting liquidity position and its proceeds remain Company assets.
- **Further Migration:** Requires separate governance approval.

Process

If adopted, the proposal will authorize the following steps:

1. Withdraw 20% of the DAO's FutarchyAMM position, receiving the corresponding SOLO and USDC.

2. Transfer the withdrawn assets to the Treasury Subcommittee Account.

3. Convert the withdrawn USDC into USDv.

4. Deploy the SOLO and USDv into the designated Raydium pool.

5. Publish the execution record and monitor the interaction between the two venues.

Execution will be coordinated with MetaDAO and occur outside an active decision-market period, after the relevant liquidity has settled.

Section 1. Authorization of Partial Withdrawal

Resolved, that the DAO authorizes a one-time withdrawal of 20% of its SOLO/USDC FutarchyAMM position, measured immediately before the first withdrawal under this proposal.

The withdrawal shall cover the proportional SOLO and USDC attributable to that portion. If multiple transactions are required, their combined withdrawals shall not exceed the established 20% amount.

Section 2. Treasury Transfer and Deployment

Resolved, that all withdrawn assets shall be transferred to the Treasury Subcommittee Account identified above.

Resolved further, that the Treasury Subcommittee is authorized to convert the withdrawn USDC into USDv and deploy the resulting USDv together with the withdrawn SOLO into the designated Raydium SOLO/USDv pool.

The liquidity position, trading fees, and USDv distributions attributable to the DAO's position shall remain Company assets. Any undeployed balances shall remain in the Treasury Subcommittee Account.

This proposal authorizes deployment of the withdrawn assets only. It does not authorize additional treasury funding, borrowing, or leverage.

Section 3. Ownership and Administration

Resolved, that the resulting Raydium liquidity position shall remain owned by the Company and controlled through the Treasury Subcommittee's designated Company Treasury Account.

Trading fees and eligible USDv distributions attributable to that position shall accrue to the Company. The Subcommittee may collect those proceeds and perform position administration within the scope of this proposal and its existing authority.

Independent participants may provide their own liquidity to the pool. Their deposits do not expand the Subcommittee's authority to migrate additional DAO liquidity.

USDv distributions remain subject to the applicable enrollment, attribution, and eligibility requirements. This proposal establishes no fixed or guaranteed rate.

Section 4. Decision-Market Safeguards and Limits

The Treasury Subcommittee and any authorized executor must implement this proposal subject to the following constraints:

- Preserving the intended operation of Solomon's decision markets takes priority over expanding the Raydium position.
- The proposal does not change FutarchyAMM's quote asset, decision rules, or governance parameters.
- No further migration from FutarchyAMM is authorized without a separate proposal.
- No borrowing, leverage, or derivatives may be used.
- Assets covered by this proposal may not be redirected to unrelated strategies or venues.
- Execution must follow the pool configuration and transaction limits recorded in the Execution Bundle.

The Treasury Subcommittee shall monitor available trading depth, execution quality, price relationships, and arbitrage activity across the venues, with particular attention to active decision markets. Different PASS and FAIL prices may reflect different expected outcomes;

monitoring shall assess whether the markets continue to express those distinctions effectively.

If execution conditions would materially impair decision-market operation, implementation shall be deferred. If concerns arise after deployment, the Subcommittee may reduce or unwind the Raydium position into the designated Company Treasury Account and report the issue to the DAO.

Any proposal for a further migration shall include a review of the initial deployment's performance during decision markets.

Plain English

If adopted, this proposal means:

- Solomon moves 20% of its DAO-owned FutarchyAMM position into a SOLO/USDv pool on Raydium.
- The Treasury Subcommittee receives the assets, converts the USDC to USDv, and deploys the new position.
- The DAO retains ownership of the liquidity and its proceeds.
- Eligible USDv on the dollar side can earn while supporting SOLO trading.
- Other participants can provide their own productive SOLO/USDv liquidity alongside the DAO.
- The remaining 80% of the DAO's existing position stays in FutarchyAMM.
- Solomon evaluates how the two venues interact during decision markets before proposing any further migration.
- Moving additional liquidity requires another governance proposal.

Disclaimer (Governance Proposal; No Professional Advice).

This document is a governance proposal and governance communication.

If adopted by the DAO through its governance mechanisms, it may become binding on the DAO and persons exercising authority under the Company Agreement to the extent provided in the Company Agreement and applicable law.

This document does not constitute legal, tax, financial, or other professional advice.

The author(s) are not acting as legal counsel to the DAO or any member or user. No attorney-client relationship is created.

You must obtain your own independent advice for your circumstances.

DP-00005: Migrate 20% of Solomon's FutarchyAMM Liquidity to USDv/SOLO

Status: Draft (intended for ratification via Governance System)

Version: 1.0.0

Owner: SOLOMON DAO LLC (via Governance System)

Applies to: DAO governance participants; the Treasury Subcommittee; and any person or body authorized to execute the withdrawal, transfer, conversion, deployment, or administration covered by this Resolution.

Effective date: Upon ratification by Governance System.

Authority note: This Resolution authorizes a one-time withdrawal of 20% of the DAO's SOLO/USDC FutarchyAMM position, transfer of the Withdrawn Assets to the Treasury Subcommittee Account, conversion of the withdrawn USDC into USDv, and deployment of the withdrawn SOLO and resulting USDv into the Destination Pool. It does not authorize additional treasury funding or further migration from FutarchyAMM.

Confidentiality classification: Public (operational/security-sensitive details may be handled under appropriate confidentiality controls)

Supersedes: None

Related: None

Intellectual Property Firewall

"Protocol" in this Resolution has the same meaning as **"Protocol IP"** as defined in the Company Agreement of SOLOMON DAO LLC (Operating Agreement Section 2.1(17)) — design, documentation, code, repositories, and other intellectual property. It does not mean an operating business, service, issuer, custodian, counterparty, or other person or entity.

Nothing in this Resolution authorizes the Company, the Head Steward, or any Subcommittee to direct, supervise, or control the operations of any Licensee, counterparty, service provider, or other person. Any external obligations arise only under the applicable License or other written agreement, and only to the extent expressly stated there.

1. Purpose

This Resolution:

1. Authorizes a one-time withdrawal of 20% of the Source Position, with the remaining 80% retained in FutarchyAMM.
2. Requires all Withdrawn Assets to be transferred to the Treasury Subcommittee Account.
3. Authorizes the Treasury Subcommittee to convert the withdrawn USDC into USDv and deploy the withdrawn SOLO and resulting USDv into the Destination Pool as Company-owned liquidity.
4. Preserves the Company's ownership of the resulting position and its proceeds, subject to the decision-market safeguards and limits below.

2. Operative rule

This is normative text proposed for adoption by Governance System. If (and only if) it is adopted, the operative clauses below are effective as stated.

3. Definitions

1. **"Company"** means SOLOMON DAO LLC.
2. **"Destination Pool"** means the designated Raydium SOLO/USDv CPMM pool, using the same full-range constant-product pricing model as FutarchyAMM.
3. **"Execution Bundle"** means the on-chain instructions implementing the actions authorized by this Resolution, together with the recorded pool configuration and transaction limits governing execution.
4. **"Governance System"** means the on-chain mechanism by which this Resolution is adopted.
5. **"Source Position"** means the DAO's SOLO/USDC FutarchyAMM liquidity position.
6. **"Treasury Subcommittee Account"** means the Treasury Subcommittee's designated Company Treasury Account at `8GVq1srBAZBsCeYpwdKUwEXzDffwAE5xSLWB1ec2gerr`.
7. **"Withdrawn Assets"** means the proportional SOLO and USDC received from withdrawal of the authorized 20% of the Source Position, measured immediately before the first withdrawal under this Resolution.

4. Background and rationale

Solomon should lead by using USDv as a quote asset for its own token. This creates productive dollar liquidity for SOLO and allows other participants to provide SOLO/USDv liquidity alongside the DAO.

USDv allows the dollar side of liquidity positions to earn while supporting trading. Establishing a SOLO/USDv pool applies that capability to Solomon's own market, with eligible liquidity providers receiving USDv distributions alongside trading fees.

At drafting, Solomon's FutarchyAMM pool is described as the largest in the MetaDAO ecosystem, with approximately $3.6 million of liquidity. This provides sufficient depth to support a limited migration while retaining substantial liquidity for decision markets.

The initial allocation is deliberately limited to 20%. It allows the DAO to observe how liquidity, trading, and arbitrage interact between Raydium and FutarchyAMM, particularly during active decision markets, before considering a larger migration.

Preserving the intended operation of decision markets remains the priority.

Any further migration requires a separate governance proposal.

Informative note (non-binding): The proposed 20% migration is estimated at approximately $700,000. The operative limit is the percentage of the Source Position established under Section 5, rather than a fixed dollar amount.

5. Authorization of partial withdrawal

5.1 Authorization

RESOLVED: The DAO authorizes a one-time withdrawal of 20% of the Source Position, measured immediately before the first withdrawal under this Resolution.

5.2 Proportional assets and aggregate limit

RESOLVED: The withdrawal shall cover the proportional SOLO and USDC attributable to that portion. If multiple transactions are required, their combined withdrawals shall not exceed the established 20% amount.

5.3 Retained liquidity

RESOLVED: The remaining 80% of the Source Position shall stay in FutarchyAMM. No further migration from FutarchyAMM is authorized without a separate governance proposal.

6. Treasury transfer and deployment

6.1 Transfer instruction

RESOLVED: All Withdrawn Assets shall be transferred to the Treasury Subcommittee Account at `8GVq1srBAZBsCeYpwdKUwEXzDffwAE5xSLWB1ec2gerr`.

6.2 Conversion and deployment

RESOLVED: The Treasury Subcommittee is authorized to convert the withdrawn USDC into USDv and deploy the resulting USDv together with the withdrawn SOLO into the Destination Pool.

6.3 Undeployed balances

RESOLVED: Any undeployed balances shall remain in the Treasury Subcommittee Account.

6.4 Funding limitation

RESOLVED: This Resolution authorizes deployment of the Withdrawn Assets only. It does not authorize additional treasury funding, borrowing, or leverage.

7. Ownership and administration

7.1 Company ownership

RESOLVED: The resulting Raydium liquidity position shall remain owned by the Company and controlled through the Treasury Subcommittee Account.

7.2 Position proceeds and administration

RESOLVED: Trading fees and eligible USDv distributions attributable to the Company's position shall accrue to the Company and remain Company assets.

The Treasury Subcommittee may collect those proceeds and perform position administration within the scope of this Resolution and its existing authority.

7.3 Independent liquidity providers

Independent participants may provide their own liquidity to the Destination Pool. Their deposits do not expand the Treasury Subcommittee's authority to migrate additional DAO liquidity.

7.4 USDv eligibility

USDv distributions remain subject to the applicable enrollment, attribution, and eligibility requirements. This Resolution establishes no fixed or guaranteed rate.

8. Decision-market safeguards and binding execution constraints

RESOLVED: The Treasury Subcommittee and any authorized executor must implement this Resolution subject to the following constraints:

1. **Decision-market priority:** preserving the intended operation of Solomon's decision markets takes priority over expanding the Raydium position.
2. **Governance parameters:** this Resolution does not change FutarchyAMM's quote asset, decision rules, or governance parameters.
3. **Migration limit:** no further migration from FutarchyAMM is authorized without a separate proposal.
4. **No leverage:** no borrowing, leverage, or derivatives may be used.
5. **Scope limitation:** assets covered by this Resolution may not be redirected to unrelated strategies or venues.
6. **Execution limits:** execution must follow the pool configuration and transaction limits recorded in the Execution Bundle.
7. **Execution timing:** execution shall be coordinated with MetaDAO and occur outside an active decision-market period, after the relevant liquidity has settled.

9. Execution record, monitoring, and further migration

9.1 Execution record

RESOLVED: The Treasury Subcommittee shall publish the execution record and monitor the interaction between FutarchyAMM and Raydium.

9.2 Monitoring

RESOLVED: The Treasury Subcommittee shall monitor available trading depth, execution quality, price relationships, and arbitrage activity across the venues, with particular attention to active decision markets.

Different PASS and FAIL prices may reflect different expected outcomes;

monitoring shall assess whether the markets continue to express those distinctions effectively.

9.3 Deferral and response to concerns

RESOLVED: If execution conditions would materially impair decision-market operation, implementation shall be deferred.

RESOLVED: If concerns arise after deployment, the Treasury Subcommittee may reduce or unwind the Raydium position into the Treasury Subcommittee Account and report the issue to the DAO.

9.4 Further migration

RESOLVED: Any proposal for a further migration shall include a review of the initial deployment's performance during decision markets.
